The image shows a bar chart with the x-axis labeled as Runtime (ns) and the y-axis not labeled. The chart compares runtime for different operations across various directories:

- **Edge List**
- **Reverse Edge List**
- **Vertex Pull**
- **Vertex Push**
- **Vertex Push Warp**

Colors used in the chart are:

- Red for Edge List
- Light Blue for Vertex Pull
- Dark Blue for Vertex Push
- Green for Vertex Push Warp
- Brown for Reverse Edge List

The chart visualizes the performance of these operations across different directories, providing insights into which method is most efficient.
