

MATHEMATICAL STRUCTURES IN LOGIC 2017
HOMEWORK 4

- Deadline: April 3 — at the **beginning** of class.
- In exceptional cases homework can be submitted electronically (in a single pdf-file!) to Frederik Lauridsen f.m.lauridsen@uva.nl
- Grading is from 0 to 100 points.
- Success!

(1) (40pt) The aim of this exercise is to understand the connection between filters and congruences of a Boolean algebra.

Given a Boolean algebra A and a filter $F \subseteq A$, define a relation \sim_F by

$$a \sim_F b \text{ iff } a \leftrightarrow b \in F.$$

Conversely, given a congruence \sim on A define F_\sim by

$$F_\sim = [1]_\sim.$$

- (a) \sim_F is a congruence. Show the \vee -clause of this statement. That is, show that if $a \sim_F b$ and $c \sim_F d$, then $a \vee c \sim_F b \vee d$.
- (b) Show that \sim is equal to \sim_{F_\sim} .
- (c) Show that F is equal to F_{\sim_F} .
- (d) Show that $F \subseteq F'$ implies that \sim_F is a subset of $\sim_{F'}$.

(2) (30pt) Let A be a Boolean algebra. A filter F of the form $\uparrow a$ for some $a \in A$ is called a *principal filter*. Let $\text{FinCofin}(\mathbb{N})$ be the Boolean algebra of all finite and cofinite subsets of \mathbb{N} .

- (a) Show that for each $n \in \mathbb{N}$, the set $\{U \in \text{FinCofin}(\mathbb{N}) : n \in U\}$ is a principal filter. Show also that it is a maximal filter.
- (b) Show that there is a unique (!) maximal non-principle filter in $\text{FinCofin}(\mathbb{N})$.

(3) (30pt)

- (a) Let A be a finite Boolean algebra. We order the set of all filters of A by inclusion. Show that A has a least non-unital filter iff A is isomorphic to a two-element Boolean algebra. Note that a least non-unital filter is a filter $F \subseteq A$ such that $F \neq \{1\}$ and for each filter $F' \neq \{1\}$ we have $F \subseteq F'$.
- (b) Deduce that the two-element Boolean algebra $\mathbf{2}$ is the only finite subdirectly irreducible Boolean algebra.
