

# Word Relatedness

Instructions ▲

## Overview

To participate in this task, you must be a native English speaker.

You will be presented with a set of words that are somewhat related. You will then be shown 10 pairs of new words, one pair at a time. Your task is to compare the two words in each pair and determine which one fits better within the given word set.

For example, you might be presented with the following set of words

*noise, blast, turbulence, drumming, outcry, racket, yelling*

and then with the pair of words:

- clatter
- spaghetti

Here the correct answer would be to select "clatter" because it is more related to the given set of words than "spaghetti".

Sometimes it might be difficult to determine which word fits better within the set (perhaps because you are not sure about the meanings of the words), but please always make a guess, even if you are not fully convinced by your answer.

## Thank you!

Your efforts in this task help linguists to understand how words are related to each other. Thanks for your participation, and have fun!
